

COLIBRY NPU

*Unlock embedded
AI potential*

We bring deep learning data processing at sub-milliwatt scale

Features

ASYGN Colibry Neural Processing Unit (NPU) is an ultra-low power microcontroller designed to accelerate AI-driven processing for image, sound, or any sensors data. It integrates a fully reconfigurable and efficient **Neural Network Processing Accelerator (NNPA)**, enabling high-performance and ultra-low power solutions for a wide range of industrial applications.

Ultra-low power Microcontroller

- ◇ 32-bit RISC-V
- ◇ Up to 300 MHz
- ◇ <1mW – 10mW
- ◇ 128 KB SRAM

Neural Network Accelerator

- ◇ On-chip NN inferences
- ◇ Fully reconfigurable
- ◇ Up to 9.6 GOPS
- ◇ 640 KB SRAM

Sensor data processing

- ◇ Parallel camera interface
- ◇ Audio and SPI/I2C motion support
- ◇ On-chip FFT and ISP accelerator

TinyML ready

- ◇ Optimized for frugal AI
- ◇ Enabling always-on AI
- ◇ Best-in-class power efficiency

<1mW

AI processing

9.6 GOPs

Compute power

300 MHz

Max frequency

32-bit

RISC-V CPU

128 KB

CPU SRAM

640 KB

NNPA SRAM

Optimized System-On-Chip for frugal edge AI applications
